

backupFence

Comendo backupFence

E-mail is the most commonly used means of communication in business today and companies are increasingly dependent on it. What would happen if your company's mail-server went offline for several hours or several days?

With BackupFence your company can have real-time backup of both in- and out-going e-mails.

In this way your company can avoid loss of data and your employees will not miss a single e-mail, no matter when errors will occur on your company's mail server or when your own backup-routines will fail.

As an example BackupFence can be used in the case that an employee accidentally has deleted an important e-mail.

Or if your company has had a break down on the mail-server or the company's own backup-routines haven't been functioning correct.

BackupFence can also be used in the case of planned maintenance on the mail-server.

Fits all mail-servers

BackupFence works with all kinds of mail server-software.

No matter if your company uses Lotus Notes domino, Microsoft Exchange Server or a Unix/Linux-based solution the company can still use BackupFence. We save a copy of the e-mail before it is sent to you.

The main advantages of BackupFence

- Avoid loss of data: We save copies of your e-mails in case of mail-server breakdown.
- No maintenance: We handle all setup and maintenance
- 24/7: The solution is always online and takes backup of every single e-mail received/sent
- Mail server independent: BackupFence works with all kinds of mail servers.
- Easy administration: There is no administration of license since the system is administered centrally by Comendo A/S.

Obsidian OÜ

BackupFence

This is how BackupFence works:

1. A copy of the e-mail is saved
2. A copy of the e-mail is saved on a backup-disk
3. The original is sent to the customer without delay

Backup is taken both on in- and outgoing e-mails.

This is how BackupFence works
